Leukoencephalopathy with Brain Calcifications & Cysts (LCC/Labrune Syndrome)

FDA Patient Listening Session

Friday, July 11, 2025

Motivation for a Patient-Listening Session

- We hope to provide the FDA with a deeper understanding of the critical challenges faced by the LCC/Labrune Syndrome community.
  - Serious impacts of disease on LCC patients
  - Effects on quality of life

- We hope to educate the FDA on the unmet medical needs of the LCC/Labrune Syndrome community.
  - No FDA-approved treatments
  - Tremendous unmet medical needs
  - Families' preferences for treatments and outcomes

The LCC Foundation
Our Mission

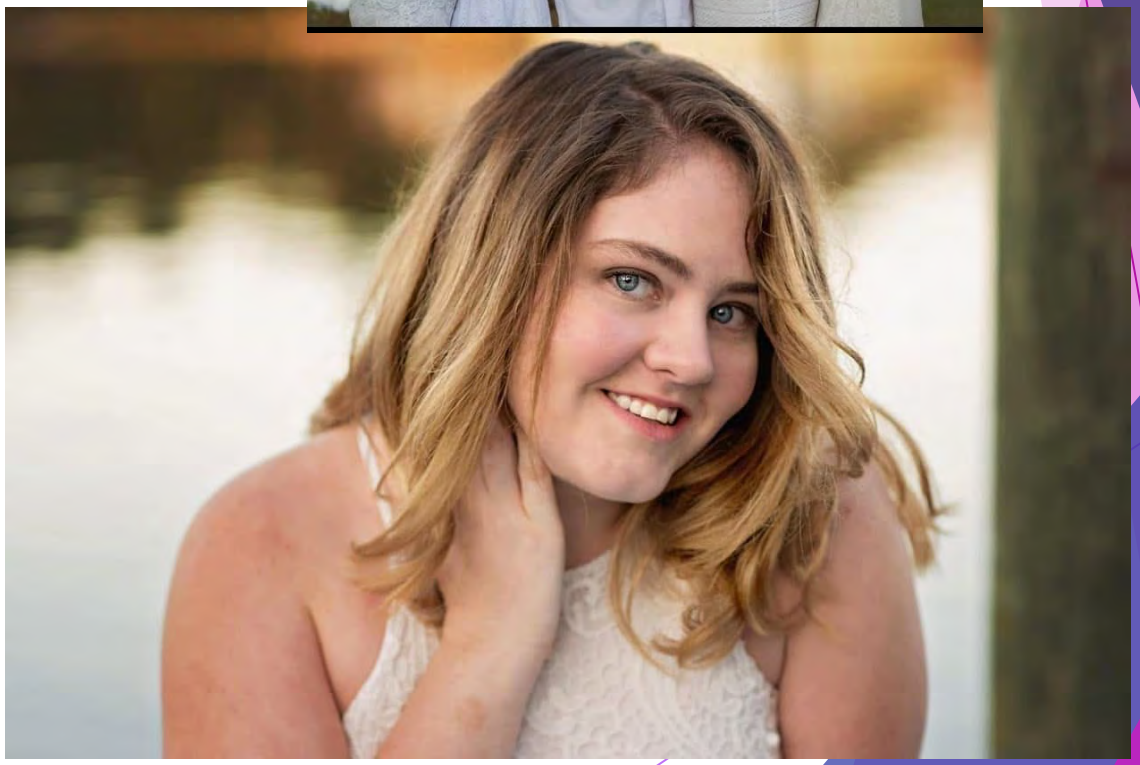
- US Based 501(c)(3) Founded in April 2022
- Proactively serve those affected by LCC by supporting programs of Education, Research, and Advocacy
- Identify sources of medical care, social services and genetic counseling; establish a communication forum among families
- Increase public awareness
- Creating information sources for health care providers
- Promote research into causes, treatment, and cure of LCC

Jamie Fraser, MD, PhD
Children's National Hospital

- Director of Leukodystrophy & Myelin Disorders Program
- Director of the Prenatal Genetics Program
- Biochemical and Medical Geneticist

Patient & Family Perspectives

Patient	Presenter	Relationship
Elisabeth	Elisabeth	Self
Zac & Ben	Danny	Dad
Ekrem	Adriana	Mom
Alice	Alice	Self
David	Lexi	Mom
Victoria	Martha	Mom



Elisabeth, USA
23 years old

Main Symptoms:

- Seizures
- Mood Disorder
- Tremors
- Dystonia

Elisabeth, USA
23 years old

Hopes for the Future:

- Any small improvement
- More normalcy/better quality of life
- More independence, stability, and dignity
- Even small improvement, I would be open to it

Patient & Family Perspectives

Ekrem	Adriana	Mom
Alice	Alice	Self
David	Lexi	Mom
Victoria	Martha	Mom

Zac & Ben, USA
16 & 12 years old

- Significant Needs
- Constant Change
- Family Balance
- Mental Health
- Physical Health
- Hope

A progressive journey

Age 4

Age 6

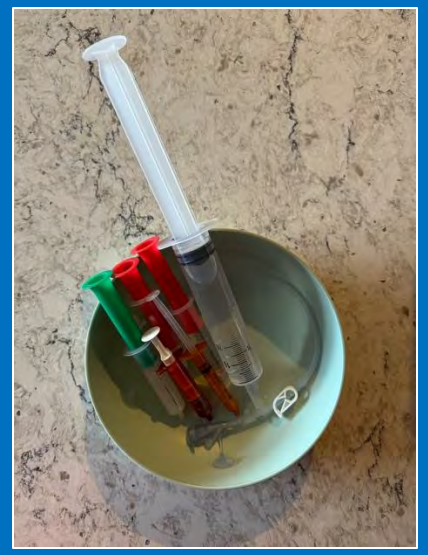
Age 7

Age 8

Age 11

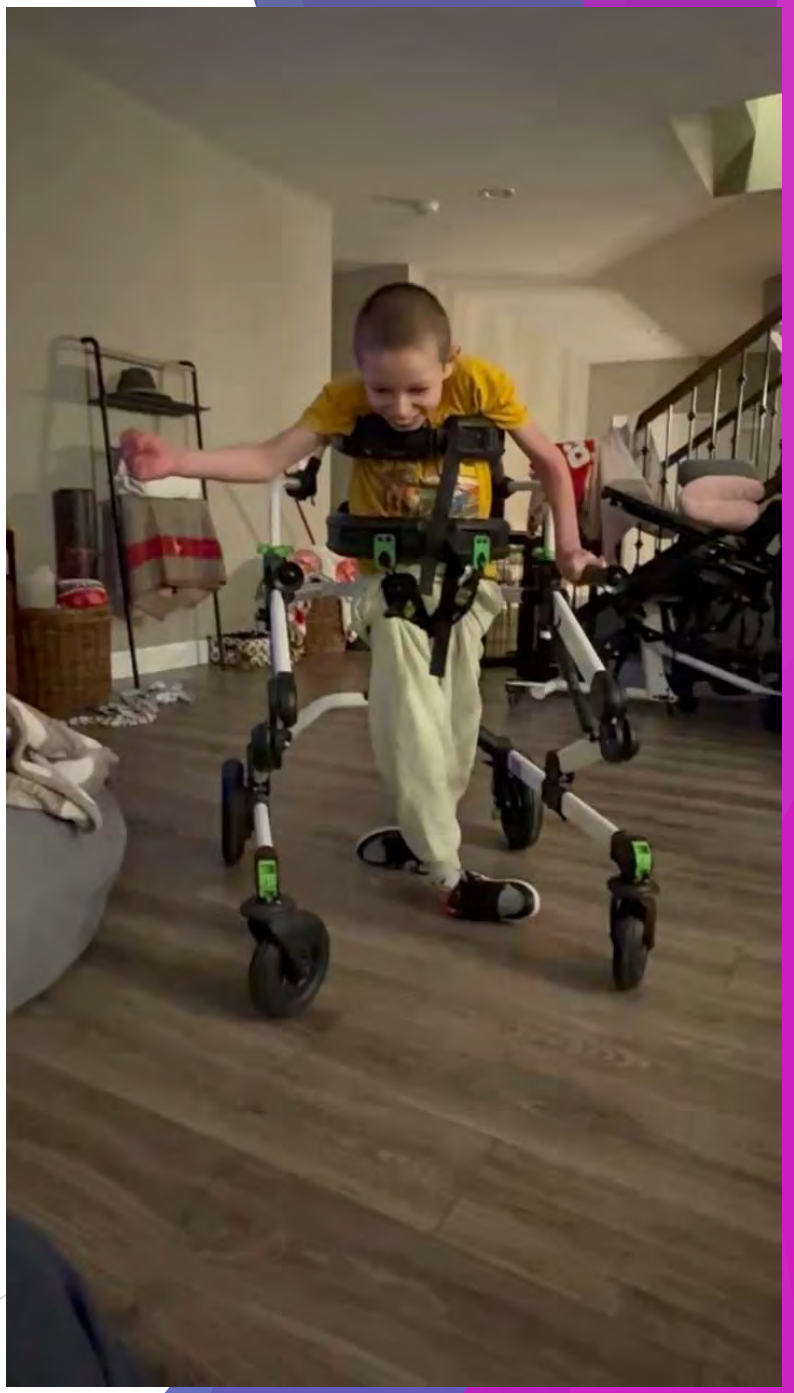
Just when you think you are set with equipment...

Stress doesn’t take a day off for caregivers



- Seizures
- Dystonia
- Medications
- Feeding
- Toileting
- Bathing
- Changing
- Bedtime
- Transitions

What do the physical challenges look like?



Zac & Ben, USA
16 & 12 years old

- Funding and solutions to advance research (ex. PRV)
- Continue to advance treatments that manage core patient challenges and halt or slow progression
- Partner to balance risk/reward for treatments of the future

Patient & Family Perspectives

Patient	Presenter	Relationship

Ekrem's Journey with LCC

- Early challenges: Born prematurely; began having seizures at 4 months—misattributed to prematurity and treated with harsh side effects.
- Developmental struggles: Diagnosed with ADHD in early childhood—later revealed to be symptoms of undiagnosed brain damage.
- Life-changing diagnosis (2017): After a grand mal seizure, CT scans and genetic testing confirmed Labrune Syndrome.

Ekrem, USA
17 years old

Ekrem's Journey with LCC (continued)

- Progressive decline: From mainstream classes to life skills programs- gradual loss of speech, motor skills, mobility and social connection.
- "In-betweener" isolation: Too impaired for general education, too aware for severe-needs classrooms- left without a true place to belong.
- Rapid disease progression: One cyst has grown into ~20; major physical decline including speech loss, muscle weakness, and choking risk.

Ekrem, USA
17 years old

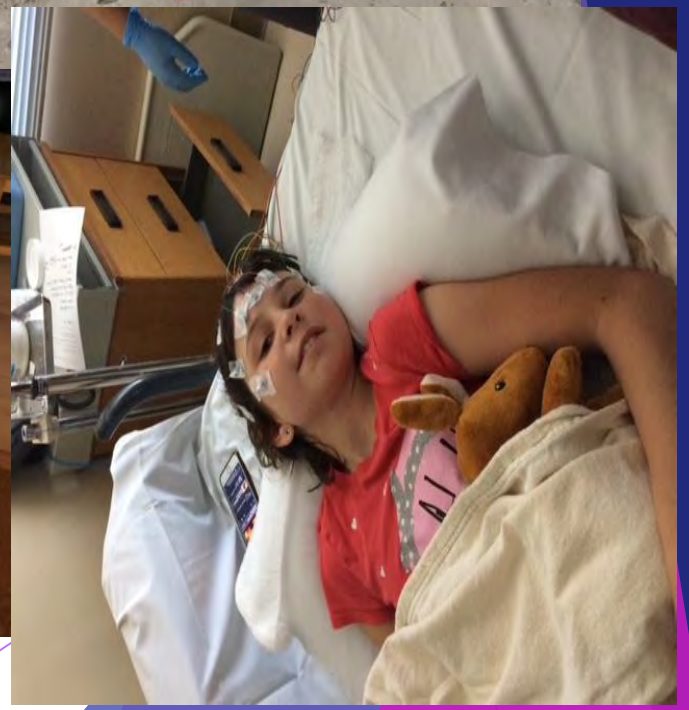
Ekrem's Journey with LCC (continued)

- Total dependence: Ekrem now needs round-the-clock care- cannot be left alone, tires easily, and experiences unpredictable seizures.
- A plea for hope: Ekrem still dreams of a normal life. We ask the FDA for a chance- access to clinical trials that could slow his decline.

Ekrem, USA
17 years old

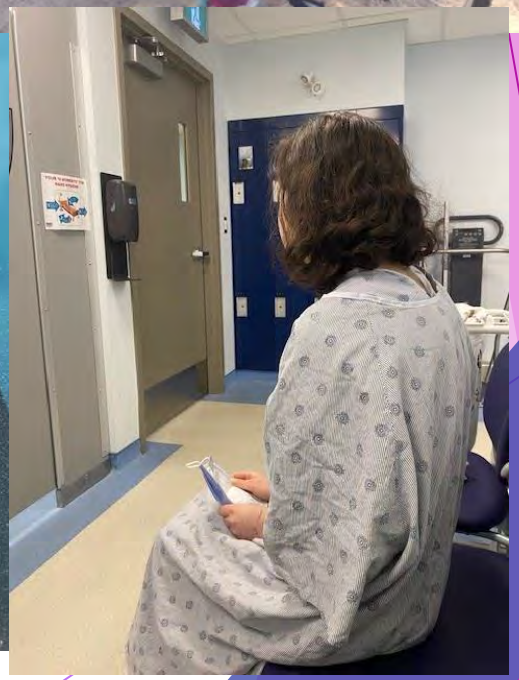
Patient & Family Perspectives

Patient	Presenter	Relationship
Elisabeth	Elisabeth	Self
Zac & Ben	Danny	Dad
Ekrem	Adriana	Mom
Alice	Alice	Self
David	Lexi	Mom
Victoria	Martha	Mom



Alice, Canada
19 years old

- Seizures as baby, outgrown by 6 months
- Active early childhood years
- Seizures start to recur at 10 yrs
- Diagnosed with LCC at 11 yrs
- Effects of Calcification/Cysts
  - Seizures
  - Vision and visual processing
  - Physical activity & balance
  - Cognitive function



Alice, Canada
19 years old

- Progressive impacts as cysts grow
- Spill-over effects on mental health
- Adaptive learning strategies important
- Support from family care givers, teachers, and health professionals
- Hopes for future:
  - Effective treatment for effects of LCC
  - Recover physical/cognitive abilities
  - Increased independence

Patient & Family Perspectives

Patient	Presenter	Relationship
Elisabeth	Elisabeth	Self
Zac & Ben	Danny	Dad
Ekrem	Adriana	Mom
Alice	Alice	Self
David	Lexi	Mom
Victoria	Martha	Mom

David, USA
5 years old

Daily Challenges/Symptoms:

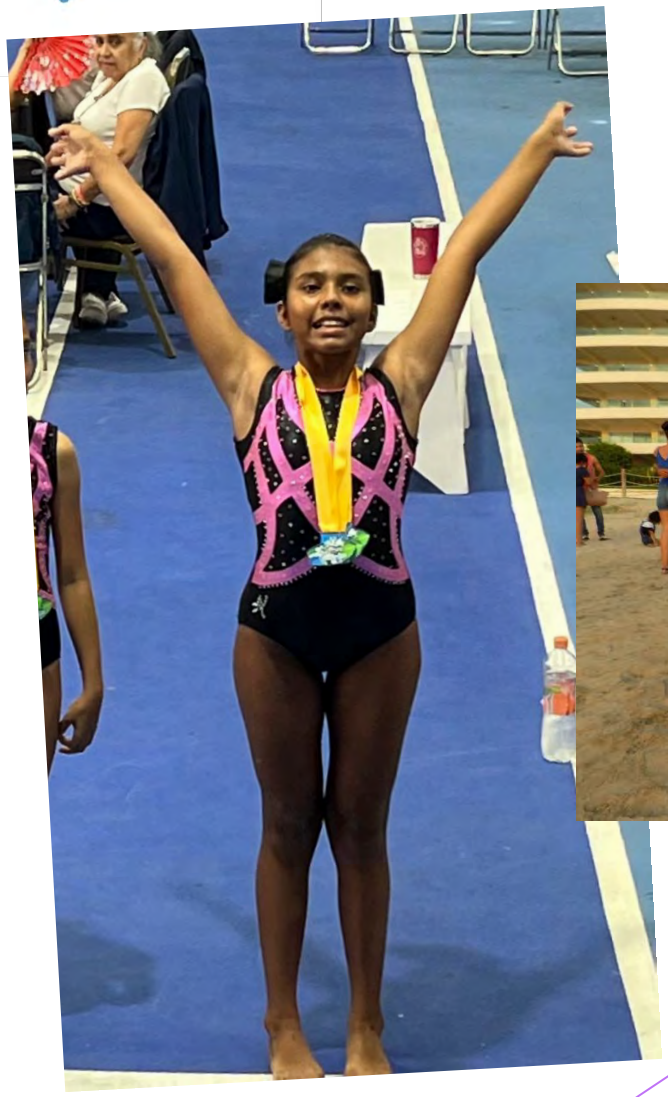
- Left-sided hemiplegia & spasticity
- AFO (ankle foot orthoses) for walking-wheelchair used when needed
- Developmental delays
- Affected vision - glasses and eye patch
- Scoliosis

David, USA
5 years old

- The Family Impact
  - Military Family
  - Stay-at-home mom
  - Limited time and energy
- The Emotional Landscape
  - Diagnosis
  - Advocacy
  - Education
  - Finding strength
- Hope & The Future
  - More normalcy for David
  - Priority of safety with potential treatments

Patient & Family Perspectives

Patient	Presenter	Relationship
Elisabeth	Elisabeth	Self
Zac & Ben	Danny	Dad
Ekrem	Adriana	Mom
Alice	Alice	Self
David	Lexi	Mom
Victoria	Martha	Mom



Victoria, Mexico
11 years old

Primary Symptoms:

- Seizures
- Psychomotor deficit - altered fine motor skills

Biggest Challenges:

- Intellectual Disabilities
- Psychomotor delays
- Hypothyroidism & precocious puberty
- Constipation
- Dry Skin
- Fatigue

Victoria, Mexico
11 years old

Care/Symptom Management:

- Victoria's treatment plan is symptom management and palliative care
- Neuropsychological therapy
- Academic support
- Physical therapy & gymnastics

Unmet Medical Needs:

- No disease-modifying treatment

SOME DAYS ARE FRUSTRATING FOR OUR FAMILY AND OUR SON DUE TO COMMUNICATION CHALLENGES, AND THE UNCERTAINTY OF THE FUTURE CAN FEEL HEAVY.
